# Marker Effects for LNM\$

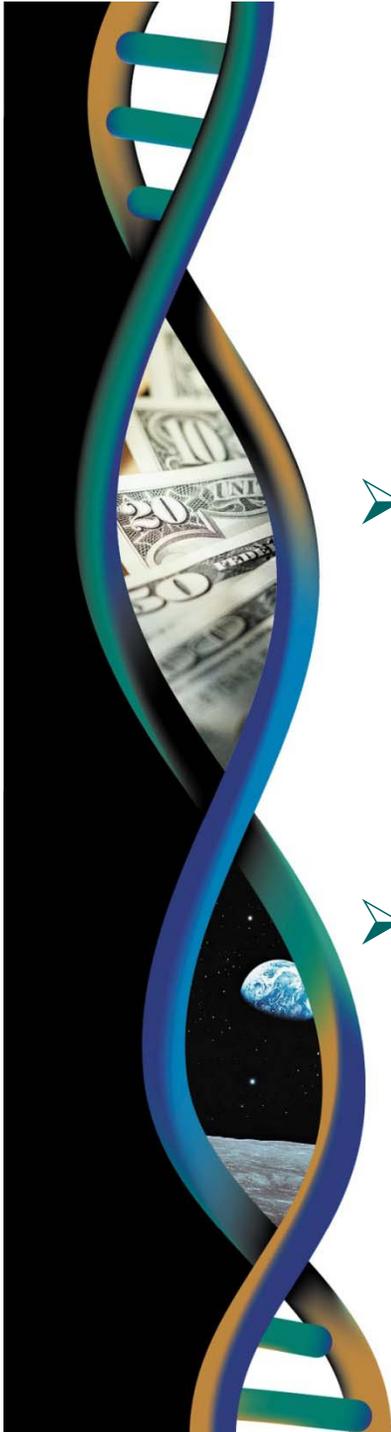

**Impact of Genomics on**

# **SOURCING GENETICS**

# Sourcing Genetics at Genex before Genomics

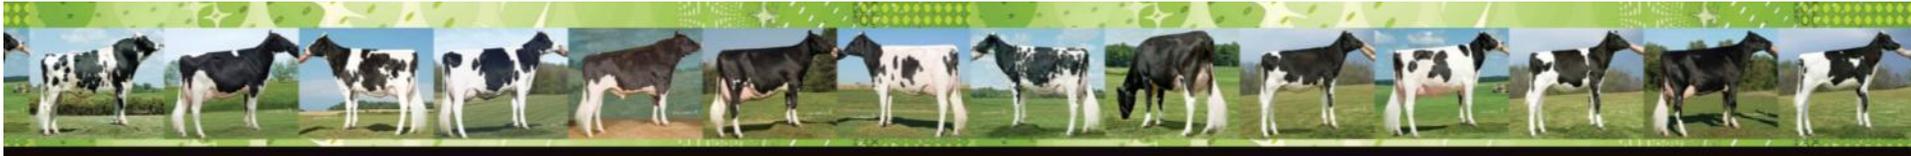

- **US Cow Population (75%)**
  - top 0.5% Net Merit
  - 240 bulls
- **MOET population (25%)**
  - 80 bulls

# Genesis MOET Program

- **1989 Started pilot program**
- **Contract 100 bull mothers**
- **4 embryos from each implanted into recipients**
- **Produce 1 bull & 1 heifer**
- **Top 80 bulls sampled**
- **Top 40 heifers – MOET**

# Genesis

the future of your herd and ours

Post-G

- > 45,000 cows and breeding-age heifers
- 17 production sites and nucleus herds
- ~300 Donor females selected for ET/IVF
  - > 80 maternal families represented

Expect to produce 3,500 embryos

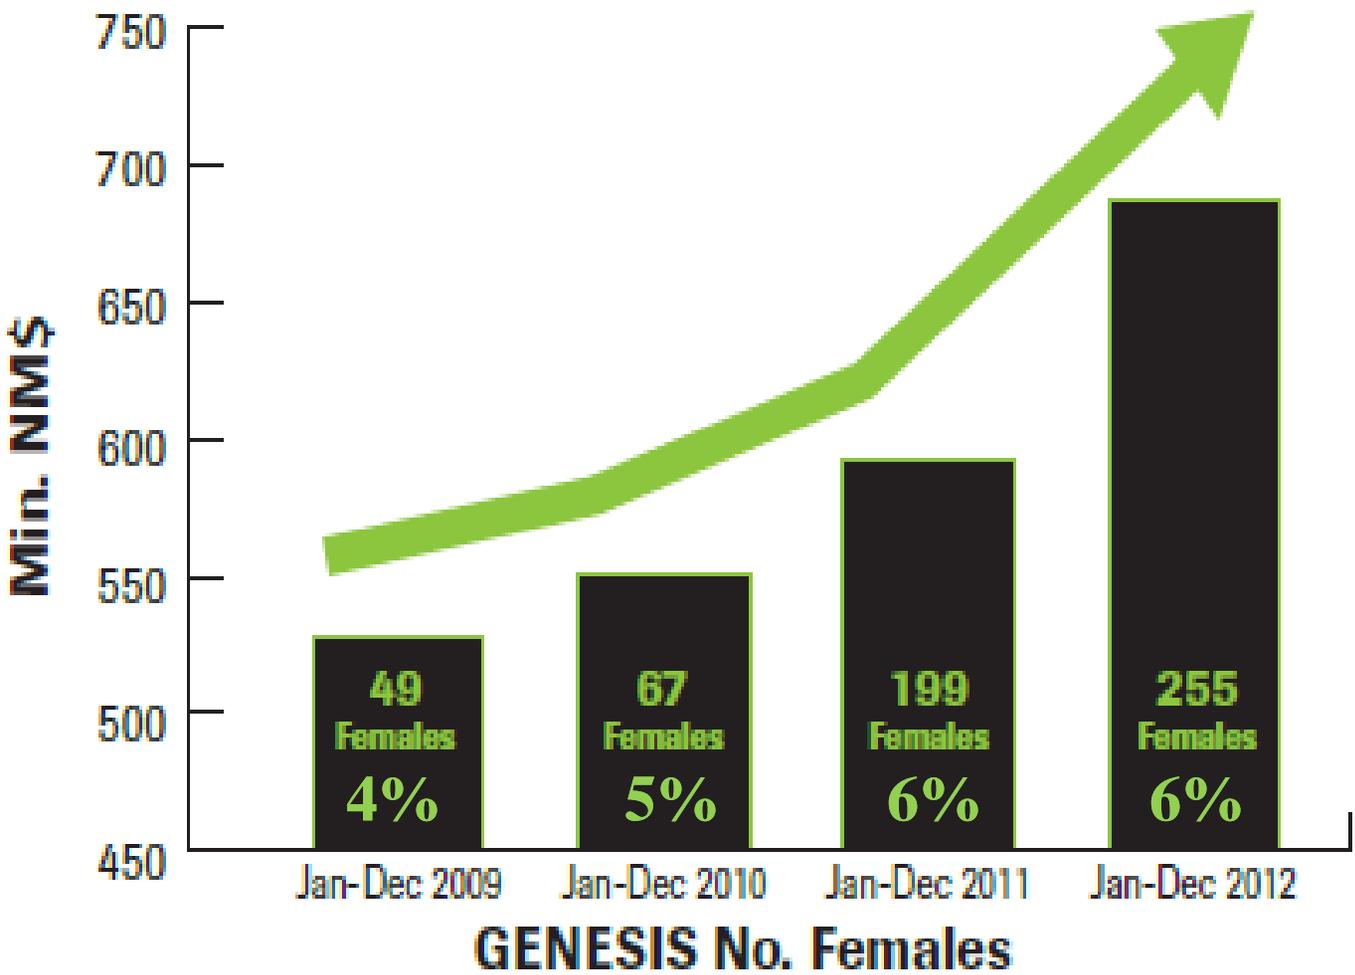

85 to 100 ET bulls selected, & natural calves

### Top 5% of Genomic Tested Females by Birthdate

# Change in Animal Population at Genex

# Female Nucleus Programs

AI companies are transitioning from managing only bulls to also managing elite females

**Impact of Genomics on**

# **PROGENY VS. GENOMIC TESTING**

# AI Center Population before Genomics

- 
- **75 bulls routinely collected**
    - 35 Progeny-test bulls
    - 40 “Proven” mature bulls
      - 4 – new “Proven” bulls from SS
      - 36 – “Proven” bulls (3 yr life span)
  - **350 – bulls ‘in-waiting’ population**
  - **35 – Quarantine**
- 
- **460 head – Total bull population**

# AI Center Population

- **40 – bulls in Quarantine**
  - **235 bulls in Collection Barn**
    - 110 – bulls in collection – yr 1
    - 75 – bulls in collection – yr 2
    - 50 – bulls in collection – yr 3
    - Average age 21 mo
- 
- **275 hd – Total bull population**

# Progeny Test vs. Genomic

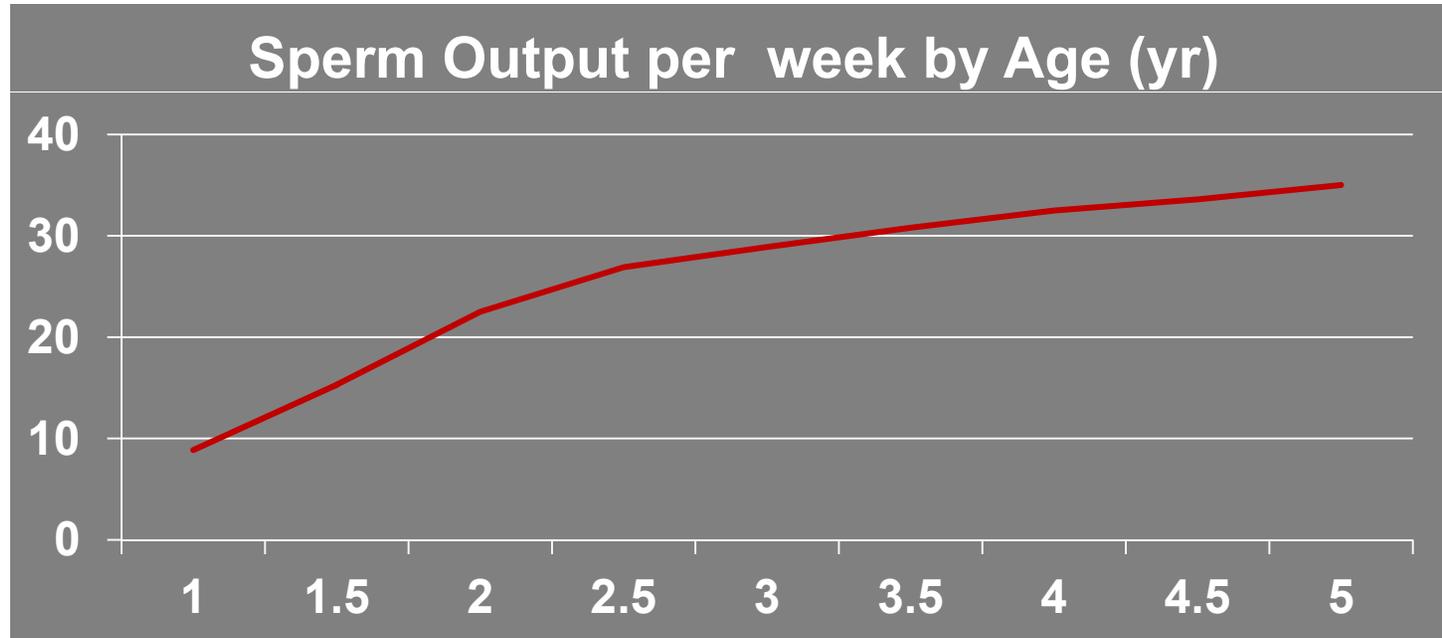

## Traditional Program

- 160 On-farm sel
- 75 Collection
- 350 “in-waiting”
- 460 Total bulls
- 6 yr Ave age
- 1 Prod. capacity

## Genomic Program

- 1000 On-farm testing
- 235 Collection
- 0 “in-waiting”
- 275 Total bulls
- 1.75 Ave age
- 0.57 Prod. capacity

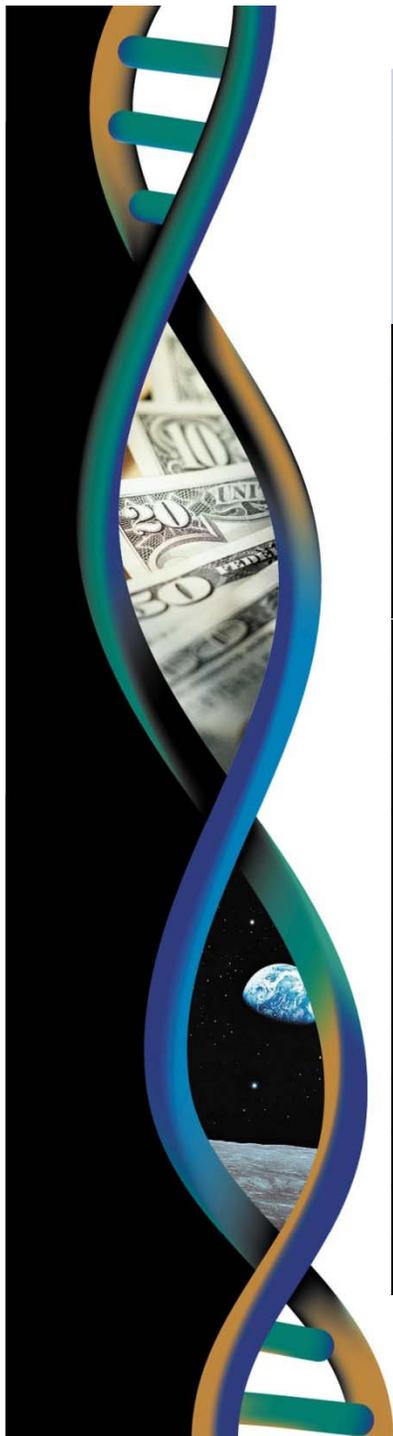

# Progeny Test vs. Genomic

# Impact of Genomics on GenChoice Collections

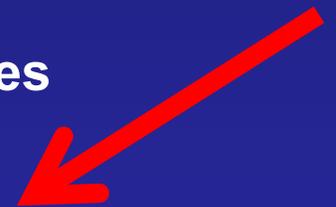

# Discovery of Missing Ancestors

Ancestor discovered (if genotyped)

| Breed       | Sire<br>% Correct* | MGS<br>% Correct | MGGS<br>% Correct |
|-------------|--------------------|------------------|-------------------|
| Holstein    | 100                | 97               | 92                |
| Jersey      | 100                | 95               | 95                |
| Brown Swiss | 100                | 97               | 85                |

\* % Correct = Top ranked candidate ancestor matches the true ancestor.

In 2013, >50,000 missing or incorrect sires were discovered and reported to breeders

# Important Numbers for 2013

- 2,500 bulls genotyped
- 10,000 females genotyped
- 45,000 GENESIS females
- 50% of bulls from GENESIS
- At least 1 million phenotype records in QUANTUM database
- Over 85,000 genotypes

# QUANTUM Size & Scope

- 200 herds and 250,000 cows
- 100,000 breeding records each month, over 2 million records in current PregCheck database
- Phenotypic Events Database thru 3/30/13
  - 600,555 cow events
  - 88,828 heifer events
- Expanding to include International data
